

Example: `tuplet-bracket-color-note-heads.ly`.

LilyPond's `get-bound-note-heads` returns the first and last note heads in any spanner. Here we color the first and last note heads of every tuplet:

Notes:

LilyPond's `get-bound-note-heads` fails when `\set Score.tupletFullLength = ##t`. The setting binds triplets to a note column on the left (which is good). But the setting binds triplets to a non-musical paper column on the right. This causes `get-bound-note-heads` to raise a fatal error.
